## ATV 12 Volt Sprayers

Croplands plan was to design a sprayer that could be used as a sprayer on an ATV motorbike, that evenly distributed the weight of the tank and solution around the rider and also keep the total full tank weight within the ATV manufactures recommendations for personal and bike safety. They also understood that more users would use it more often if it could fit into the ute or trailer as well. Conventional countoured ATV sprayers do the first part but cannot sit flat, therefore Croplands found their niche'.

The Croplands ATV sprayers consists of a 60 litre UV stablized polyethylene flat bottom tank, a 12 volt pump and suction filter, which has been recessed for safety and keeping out of the elements but also adds as a baffle in the tank also. The tank also comes complete with a small tool or utility box and hinged lid for storing spare nozzles or similar.

Other features include Flojet 7.6 lpm on demand diaphragm pump, Swissmex trigger, lance and adjustable nozzle. Swissmex also supply the large diameter lid and lid strainer. 6 metres of 10mm chemical resistant spray hose, wiring harness to connect to the battery and tie down strap finish the list.

### **Options available are;**

- Upgrade to 15 lpm (max) pump 4 bar maximum pressure.
- Pressure relief valve and gauge, to ensure correct and accurate application of solution
- 1.5 metre fire break boom, 3 and 4 metre Blockmaster booms
