SOME MODELS NOW AVAILABLE WITH **HYDRAULIC DRIVE**

Cast from LM6 Marine Grade Aluminium our reels are built tough and robust to suit any type of vehicle application whether it be for fire fighting, refuelling, cleaning, or pressure use. The unique gooseneck design has a 25mm water way and is threaded to allow the fitting of a Storz or similar coupling.

The position of the Gooseneck allows quick and easy fitting and removal of hose.

Goosenecks and swivels are pressure tested to 1000psi.

A stainless steel swivel and gooseneck can be fitted for some chemical and fuel applications (extra costs apply)

Ezy Wind® HOSE REELS

MANUAL, ELECTRIC, AUTO REWIND AND REMOTE CONTROLLED

THE ADVANTAGES

- Heavy duty Electric Reels have a high torque slow revving motor.
- Designed to assist Fire Fighters in recovery of an injured person in rough steep terrain
- Electric motor is positioned at the front of the reel to allow for easy servicing and chain adjustment.
- A 3/8 BS Simplex Roller Chain is used which is common in Australia. We do not use American Dog Bone chain which is hard to get and has to be ordered in by suppliers.
- All electric components eg. motor, solenoid and relay are enclosed in weatherproof housing with electrics coated in clear protective laquer.
- Remote controlled model has a specially designed remote control sender unit with built-in safety cut-off.
- Our push-button switch has a moisture O-ring seal inside
- We do not supply Quick Coupling electric fittings as these common fittings get wet and fail. We have bare end wires which can be wired into the truck system and sealed from moisture.
- Swivels made in Australia have an “off-the-shelf” common O-ring.
- Swivels have a standard 1” BSP thread common in water plumbing and fire trucks in Australia.
- Gooseneck allows the fitting and removal of the hose to add extra hose without removing the outside cover
- Waterway through Swivel, Axle and Gooseneck is 25mm unrestricted flow.
- Stainless steel Axle, Fairlead Rollers, Nuts and Bolts.
- Manual crank handle is stainless steel with rotating synthetic grip.
- Under Workplace Health & Safety all reels have removable crank handle and chain covers.

SATISFIED USERS OF THIS AUSTRALIAN MADE PRODUCT INCLUDE:

- **QLD Rural Fire Service**
- **Forestry Plantations Queensland**
- **NSW EPA Parks & Wildlife**
